

ServerLogic Launches Drupal 7 Migration Service

PORTLAND, OR—January 7, 2011 -- ServerLogic formally announced formation of a Drupal 7 Migration Service led by Todd Tomlinson, VP of Public Sector Solutions at ServerLogic. This service is targeted at companies and organizations who wish to port their Drupal environments, including custom modules from previous versions, to the new Drupal 7. Tomlinson indicated that “our service will enable organizations to take full advantage of the new features and functions of the latest Drupal release. It could also potentially allow them to eliminate some custom modules in their current environment by leveraging the new capabilities of Drupal 7.”

Drupal 7 provides many benefits over previous versions, including:

- Vastly improved administrative user interface
- Flexible content and custom fields
- Better visual presentation and theming with Render API
- Accessibility is greatly improved
- Adding images to content is now built in
- Automated code testing
- Out-of-the-box support for SQLite, MySQL/MariaDB, and PostgreSQL
- Better software distribution support
- Support for the Semantic Web through RDFa markup

ServerLogic’s Drupal 7 Migration Team has been formed from members of ServerLogic’s full service Drupal Practice, all of whom are experienced in design, configuration, and customization of Drupal CMS solutions. For organizations interested in obtaining assistance with migrating their current Drupal environment to Drupal 7, contact Todd Tomlinson at toddtomlinson@serverlogic.com or call 503.416.8344.

ABOUT TODD TOMLINSON

Todd Tomlinson is the author of the recently published *Pro Drupal 7 Development, 3rd Edition*, which is currently the #1 selling software development technical book on Amazon.com. Todd is a 32-year veteran of the IT industry and is responsible for ServerLogic’s Public Sector Solutions group. Todd has a long track record of helping public and private sector clients through the process of defining, designing, developing, deploying, and supporting web based solutions and architectures. Over his career Todd has led organizations around the globe with strategic online initiatives. He is widely recognized for his expertise in eGovernment, Libraries, Higher Education, K-12 and web content management solutions – and is the author of *Beginning Drupal 7* (Apress Publishing).
